

**MATH 0030 - ANALYTICAL GEOMETRY AND CALCULUS I****SECTION A**

1. Division: Sciences & Mathematics  
2. Subject Code: MATH  
3. Course Number: 0030  
4. Course Title: ANALYTICAL GEOMETRY AND CALCULUS I  
5. Semester of First Offering: FALL 2014

**SECTION B General Course Information**

1. Units: 4.0 Variable Units: N/A  
2. This Course is: Degree-Applicable Credit - Transferable  
3A. Cross-List: 3B. Formerly:

**Course Format and Duration**

- | 4. Standard Term Hours per Week |          | 5. Standard Term Total Semester Hours |           |
|---------------------------------|----------|---------------------------------------|-----------|
| Lecture/Discussion:             | 4        | Lecture/Discussion:                   | 72        |
| Lab:                            |          | Lab:                                  |           |
| Activity:                       |          | Activity:                             |           |
| By Arrangement:                 |          | By Arrangement:                       |           |
| <b>Total Hours per Week:</b>    | <b>4</b> | <b>Total Hours :</b>                  | <b>72</b> |
6. Minimum hours per week of independent work done outside the class: 8

**Course Preparation - (Supplemental form B required)**

- 7a. Prerequisite(s): (Course and/or other preparation/experience that is **REQUIRED** to be completed previous to enrollment in this course.)  
Completion of MATH 8 and either MATH 12 or 29 with grades of "C" or better, or placement by matriculation assessment process
- 7b. Co-requisite(s): (Courses and/or other preparation that is **REQUIRED** to be taken concurrently with this course.)
- 7c. Advisory: (**MINIMUM** preparation **RECOMMENDED** in order to be succesful in this course. Also known as "Course Advisory".)

**Catalog Description And Other Catalog Information:****8. Repeatability: Not Repeatable**

Please note: Repeatability does not refer to repeating courses because of substandard grades or a lapse of time since the student took the course. A course may be repeated only if the course content differs each time it is offered and the student who repeats it is gaining an expanded educational experience as stipulated in Title V.

- Skills or proficiencies are enhanced by supervised repetition and practice within class periods.
- Active participatory experience in individual study or group assignments is the basic means by which learning objectives are attained.
- Course content differs each time it is offered.

Explanation for above repeatability selection:

**9a. Grading Option:** Standard Grade

**9b. Catalog Description:**

Introduction to differential and integral calculus. Content includes limits, continuity, differentiation and integration of algebraic, trigonometric, exponential, logarithmic, hyperbolic and other transcendental functions; as well as application problems.

**Course Outline Information**

**10. Student Performance Objectives:** (Performance objectives for all credit courses must indicate that students will learn critical thinking and will be able to apply concepts at college level. Performance objectives must be related to items listed in Section 11.)

1. Evaluate the limit of a function using limit laws and L'Hospital's Rule;
2. determine whether or not a function is continuous at a point and on an interval;
3. calculate the derivative of algebraic, trigonometric, exponential, logarithmic, hyperbolic, and other transcendental functions using derivatives rules;
4. use the derivative in various applications, such as calculating velocity, acceleration, the slope of a tangent line, optimization, curve sketching, and related rates;
5. evaluate anti-derivatives and definite integrals using the Fundamental Theorem of Calculus; and
6. demonstrate improved algebra and trigonometry skills by applying these skills to solve calculus problems.

**11. Course Content Outline:** (Provides a comprehensive, sequential outline of the course content, including all major subject matter and the specific body of knowledge covered.)

- I. Review
  - A. Algebra of Functions, Including Composition
  - B. Graphing Functions, Including Shifting and Scaling
  - C. Inverse Functions
  - D. Exponential and Logarithmic Functions
  
- II. Limits and Rates of Change
  - A. Discussion of the Tangent and Velocity Problems
  - B. Limit of a Function
  - C. Calculating Limits using Properties of Limits
  - D. Formal Definition of a Limit and Delta-Epsilon Proofs
  - E. Continuity
  - F. Applications
    - 1. Tangents
    - 2. Velocities
    - 3. Other
  
- III. Derivatives
  - A. Definition of the Derivative of a Function
  - B. Differentiation Formulas
  - C. Derivatives of Functions
    - 1. Polynomials
    - 2. Exponential Functions
    - 3. Trigonometric Functions
    - 4. Inverse Trigonometric Functions
    - 5. Logarithmic Functions
    - 6. Hyperbolic Functions
  - D. Chain Rule
  - E. Implicit Differentiation
  - F. Higher Order Derivatives
  - G. Related Rates
  - H. Differentials: Linear and Quadratic Approximations
  
- IV. Curve Sketching and Additional Applications
  - A. Maximum and Minimum Values of a Function
  - B. Mean Value Theorem
  - C. Monotonic Functions and the First Derivative Test
  - D. Concavity and Points of Inflection
  - E. Limits at Infinity; Horizontal Asymptotes
  - F. Curve Sketching
  - G. Applied Maximum and Minimum Problems
  - H. Indeterminate forms and L'Hospital's Rule
  - I. Newton's Method
  - J. Antiderivatives
  
- V. Integration
  - A. Summation Notation
  - B. Area under a Curve
  - C. Fundamental Theorem of Calculus
  - D. The Definite Integral
    - 1. Defined as the Limit of a Riemann Sum
    - 2. Using Fundamental Theorem of Calculus Part II

**12. Typical Out-of-Class Assignments:** (Credit courses **require** two hours of independent work outside of class for each lecture hour, less lab/activity classes. List type of assignments including library assignments.)

**a. Reading Assignments:** (Submit at least 2 examples.)

Read in your textbook how the first and second derivative of a function influence the graph of the function.

Research online the history of the development of calculus, including Newton and Leibniz.

**b. Writing, Problem Solving or Performance:** (Submit at least 2 examples)

1. Write a report on the historical and mathematical origins of l'Hospital's rule.

2. After reading about Newton's and Leibniz's development of calculus, write a 3 - 5 paragraph essay comparing and contrasting each approach.

**c. Other** (Term projects, research papers, portfolios, etc.)

**13. Required Materials:**

**a. All textbooks, resources and other materials used in this course are college level?**

- Yes  
 No

**b. Representative college-level textbooks (for degree applicable courses) or other print materials:**

**Book 1:**

**Author:** William Briggs & Lyle Cochran  
**Title:** Calculus: Early Transcendentals  
**Publisher:** Addison-Wesley  
**Date of Publication:** 2014  
**Edition:** 2nd

**c. Other materials and/or supplies required of students:**

**14. Check all instructional methods used to present course content:**

- |  |  |
|--|--|

| <input checked="" type="checkbox"/> Discussion Seminar | <input type="checkbox"/> Distance Education (requires supplemental form) |
| <input type="checkbox"/> Lab                           | <input type="checkbox"/> Work Experience                                 |
| <input checked="" type="checkbox"/> Directed Study     | <input type="checkbox"/> Tutoring  |

Other:

Give detailed examples of teaching methodology that relate to the course performance objectives:

Example 1- Interactive lecture format to develop the concept of what a derivative represents, given a variety of functions (e.g., rational, polynomial, trigonometric, exponential, logarithmic). To help students see the commonalities and differences between the derivatives of each type of function, the instructor will incorporate algebraic analysis through equations and visual analysis through graphing. Students will participate verbally and will work several examples.

Example 2- In class, small group collaborative learning activities will focus on applied physics problems involving derivatives. These will include analysis of velocity, acceleration, and other instantaneous rates of change. Students will practice reading problems, interpreting problems, and developing solutions with peers.

**15. Methods of Assessing Student Learning**

**15a. Methods of Evaluation:**

- |  |  |
|--|--|
| <input type="checkbox"/> Essay Exam                  | <input type="checkbox"/> Reports                         |
| <input type="checkbox"/> Objective Exam              | <input checked="" type="checkbox"/> Problem Solving Exam |
| <input type="checkbox"/> Projects                    | <input checked="" type="checkbox"/> Skill Demonstration  |
| <input checked="" type="checkbox"/> Class Discussion | <input type="checkbox"/> Other                           |

**15b. (All courses must provide for measurement of student performance in terms of stated student performance objectives, Area 10, and culminate in a formal recorded grade based on uniform standards. Submit at least 2 examples.)**

1. A particle moves on a vertical line so that its coordinate at time  $t$  is  $y = t^3 - 12t + 3$ , for  $t > 0$ . Find the velocity and acceleration functions. When is the particle moving upwards and when is it moving downwards? Find the distance the particle moves in the time interval  $t = 1$  to  $t = 3$ . This problem is graded for correct method and accuracy.
2. Find an equation of the line through the point (3, 5) that cuts off the least area from the first quadrant. This problem is graded for method and accuracy.

**SECTION C**

**1. Program Information:**

- In an approved program
- Part of a new program
- Not part of an approved program

**2. TOP Code Information**

Program Title: Mathematics, General 170100

**3. Course SAM Code:**

- A - Apprenticeship Course
- B - Advanced Occupational
- C - Clearly Occupational
- D - Possibly Occupational
- E - Non-Occupational

**4. Faculty Minimum Qualifications/Degrees:**

Mathematics

**Comments:**

**SECTION D****General Education Information:****1. College Associate Degree GE Applicability:**

Communication &amp; Analytic Thinking

**2. CSU GE Applicability:**

Physical Sciences Quantitative Reasoning

**3. IGETC Applicability:**

2: Mathematical Concepts &amp; Quantitative Reasoning

**4. CAN :** MATH 210 Single Variable Calculus I Early Transcendentals; and, with MATH 31, MATH 900S**5. LDTP:** Single Variable Calculus Sequence**SECTION E****1. Articulation Information:** (Required for Transferable Courses Only)

- CSU Transferable
- UC Transferable
- CSU/UC Major Requirement.

If CSU/UC major requirement, list campus and major. (Note: Must be lower division)

**2. List at least one community college and its comparable course.** If requesting CSU and/or UC transferability also list a CSU/UC campus and comparable lower division course

American River College: MATH 400 Calculus I

CSU Sacramento: MATH 30 Calculus I

UC Davis: MATH 21A Calculus

**SECTION F**

**Planning and Resources:** Please address the areas below:

**1. Evidence of Need or Potential:** recommendations of advisory committee, connection to existing or planned degrees/certificates, or regional/national developments, transfer university requirements.

Required for all math, physics, and engineering majors.

**2. Appropriateness to Mission:** connection to basic skills, transfer, career technical education, or lifelong learning; relationship

Transfer-level math class.

**3. Place in Program/Department:** relationship to student learning outcomes identified by program, connection to general education, or articulation with other institutions.

Meets GE applicability for Math Competency and Communication and Analytical Thinking. Course includes all four math program SLO's. (Equations and Expressions, Visual Models, Applied Problems, Communication)

**4. Availability of Faculty and Facilities:** minimum qualifications to teach course, special training for instructors, or long-term physical impact of course.

All math faculty members meet the minimum qualifications to teach this course. No special training would be required.

**5. Potential Impact on Resources:** impact on library, computer support, transportation, equipment, or other needs

No additional resources are needed since we have the classroom space and technology already available.

**SECTION G**

**1. Maximum Class Size (recommended):** 35

**2. If recommended class size is not standard, then provide rationale:**
